DESCRIZIONE / DESCRIPTION / DESCRIPTION / DESCRIPCIÓN / BESCHREIBUNG

The cable gland probe is a long flexible fiber cable with one end equipped with a pulling eye and the other with a flexible elastic head. It is used to insert electrical cables into corrugated pipes. Nylon cable pulling probe, black, Ø 4 mm, 20 meters, with interchangeable terminals. The Ø 4 mm nylon probe is indicated in civil electrical installations and is ideal for short and tortuous sections. The interchangeable brass fittings are threaded directly on nylon; with high breaking load, they are practical and easy to replace. Advantages: economy, ease of use and high flexibility. German plastic, Made in Italy product.
